Scoring table: PAM 150 Gap 11

Searched: 82229 seqs, 29864866 residues

Post-processing: Minimum Match 0% Listing first 45 summaries

Database: swiss-prot38 1:swissprot

Statistics: Mean 50.140; Variance 71.058; scale 0.706

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

FUNCTION: TPA CONVERTS PLASMINOGEN TO PLASMIN BY HYDROLYZING A SINGLE R-V BOND IN PLASMINOGEN. ACTIVE IN TISSUE REMODELING AND SINGLE R-V BOND IN PLASMINOGEN. ACTIVE IN EIBRINOLYSIS, AND IN CELL MIGRATION. PARTICULARLY IN FIBRINOLYSIS, AND IN CELL MIGRATION. CAPALYTIC ACTIVITY: SPECIFIC CLEAVAGE OF ARG-|-VAL BOND IN PLASMINOGEN TO FORM PLASMIN.

MISCELLANEOUS: TPA ATTACHES TO THE KRINGLE STRUCTURE OF THE A
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 SIMILARITY: CONTAINS 1 EGF-LIKE DOMAIN.
SIMILARITY: CONTAINS 1 FIBRONECTIN TYPE-I DOMAIN.
SIMILARITY: CONTAINS 2 KRINGLE REGIONS.
SIMILARITY: BELONGS TO PEPTIDASE FAMILY $1; ALSO KNOWN

-i- FUNCTION: THE ENZYME CLEAVES LYS-ARG AND ARG-SER BONDS. IT
ACTIVATES, IN A RECIPROCAL REACTION, FACTOR XII AFTER ITS BIN
TO A NEGATIVELY CHARGED SURFACE. IT ALSO RELEASES BRADYKININ
HMW KININGEN AND MAY ALSO PLAY A ROLE IN THE RENIN-ANGIOTENS
SYSTEM BY CONVERTING PRORENIN INTO RENIN.

The present sequence is a serine protease designated BSSP-3, which is isolated from human brain tissue. Transformants may be used to produce the enzyme or its partial sequences. Products from the present invention are used for screening for potential peptide or non-peptide serine protease inhibitors or expression regulators for use as drugs.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  W99087 standard; Protein;

Neurotrypsin p and polynucleotides can be used: (i) to inhibit tumours, including metastases, e.g. of brain or retina; (ii) to minimise tissue damage caused by stroke or brain injury (having a protective effect on the penumbra zone); (iii) to treat or prevent neurodegeneration,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Neurodegeneration; neu epilepsy; hypoxia; isc emphysema; bronchitis.

                                             fibrin deposition; adhesion
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                The present sequence is a serine protease designated BSSP-3, which is isolated from mouse brain tissue. Transformants may be used to produce the enzyme or its partial sequences. Products from the present invention are used for screening for potential peptide or non-peptide serine protease inhibitors or expression regulators for use as drugs.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  New serine protease expressed in brain tissue - used in screening for potential serine protease inhibitors for drug use Example 1; Page 51-54; 69pp; Japanese.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      W99088 standard; Protein; W99088;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     injury associated with protease expression (specifically emphysema or bronchitis).

Claim 5; Page -; 3lpp; English.
Variants W52814-W52817 containing two or more functional regions were created from tissue plasminogen activator (tPA)(W52813). The t-PA variants have a higher fibrin-stimulated activity than fibrinogen-stimulated activity so they will act preferentially at the site of a clot and not systemically. They can be used for treating vascular diseases and conditions or to prevent fibrin deposition or adhesion formation or reformation.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Disulfide_bond Cleavage_site Disulfide_bond Disulfide_bond Disulfide_bond
                                                                                                                                                                       Treatment of vascular conditions or disease - using tissue plasminogen activator variant having amino acid substitutions in protease domain to increase fibrin specificity
Claim 4; Page -; 31pp; English.
Variants W52814-W52817 containing two or more functional regions were created from tissue plasminogen activator (tPA)(W52813). The t-PA variants have a higher fibrin-stimulated activity than fibrinogen-stimulated activity so they will act preferentially at the site of a clot and not systemically. They can be used for treating vascular diseases and conditions or to prevent fibrin deposition or adhesion formation or reformation.

Note: This sequence is not given in the specification but was created from twildtype t-PA sequence (W52813) disclosed by the inventors.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             US5714145-A.

                                                                                                                                                                                                                                                                                                   Treatment of vascular conditions or disease - using tissue plasminogen activator variant having amino acid substitutions in protease domain to increase fibrin specificity Disclosure, Fig 1; 31pp; English.

The Tissue plasminogen activator (tPA) was used to create variants (W52814-W52817) containing two or more functional regions. The t-PA variants have a higher fibrin-stimulated activity than fibrinogen-stimulated activity so they will act preferentially at the site of a clot and not systemically. They can be used for treating vascular diseases and conditions or to prevent fibrin deposition or adhesion formertion or reference or reference.

Mutant tissue plasminogen activator proteins (W54147-W54158) are created by single or multiple amino acid substitutions. Compositions containing the t-PA variant are used for treating vascular disorders, for preventing fibrin deposition or for preventing adhesion formation or reformation. Note: This sequence is not given in the specification but was created sequence 527 AA;

Mutant tissue plasminogen activator proteins (W54147-W54158) are created by single or multiple amino acid substitutions. Compositions containing the t-PA variant are used for treating vascular disorders, for preventing fibrin deposition or for preventing adhesion formation or reformation. Note: This sequence is not given in the specification but was created from the wild type by the indexer.

Variants W52814-W52817 containing two or more functional regions were reated from tissue plasminogen activator (tPA)(W52813). The t-PA ariants have a higher fibrin-stimulated activity than ribrinogen-stimulated activity so they will act preferentially at the site of a clot and not systemically. They can be used for treating vascular diseases and conditions or to prevent fibrin deposition or adhesion formation or reformation.

Note: This sequence is not given in the specification but was created from the wildtype t-PA sequence (W52813) disclosed by the inventors. Sequence 527 AA;

                                               Mutant tissue plasminogen activator proteins - useful for treating vascular disorders, preventing tissue adhesion(s), etc. Claim 2; Page -; 24pp; English.

Mutant tissue plasminogen activator proteins (W54147-W54158) are created by single or multiple amino acid substitutions. Compositions containing the t-PA variant are used for treating vascular disorders, for preventing fibrin deposition or for preventing adhesion formation or reformation. Note: This sequence is not given in the specification but was created sequence 527 AA;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Mutant tissue plasminogen activator proteins - useful for trea vascular disorders, preventing tissue adhesion(s), etc. Claim 2; Page -; 24pp; English.

Mutant tissue plasminogen activator proteins (W54147-W54158) a by single or multiple amino acid substitutions. Compositions the t-PA variant are used for treating vascular disorders, for fibrin deposition or for preventing adhesion formation or refo Note: This sequence is not given in the specification but was from the wild type by the indexer.

Mutant tissue plasminogen activator proteins (W54147-W54158) are created by single or multiple amino acid substitutions. Compositions containing the t-PA variant are used for treating vascular disorders, for preventing fibrin deposition or for preventing adhesion formation or reformation.

Note: This sequence is not given in the specification but was created from the wild type by the indexer.
                                 t-PA mutant (Y156D)
Amino acid substitution; t-PA; vascula
fibrin deposition; adhesion formation.

                                                                                                                                                  Mutant tissue plasminogen activator proteins - useful for treating vascular disorders, preventing tissue adhesion(s), etc. Claim 6; rage -; 24pp; English.

Mutant tissue plasminogen activator proteins (W54147-W54158) are created by single or multiple amino acid substitutions. Compositions containing the t-PA variant are used for treating vascular disorders, for preventing fibrin deposition or for preventing adhesion formation or reformation. Note: This sequence is not given in the specification but was created sequence 527 AA;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Domain
